Subject: Notification on Acceptance of Greiner Blood Collection Tubes

Dear Valued Client,

We are pleased to inform you that our laboratory has completed an internal equivalency assessment to evaluate the compatibility of Greiner blood collection tubes with our GASTROClear and LUNGClear test lines.

Following thorough validation, we confirm that:

Greiner Vacuette® K2EDTA tube (#456043 and #454020) with purple top is suitable for use with LUNGClear, and

Greiner Vacuette® Serum Clot Activator tube (#456089 and #456092) with red top is suitable for use with GASTROClear.

The performance of these tubes has been found to be equivalent to the previously specified collection devices, with no impact on risk scores or risk category outcomes.

This update reflects our ongoing commitment to providing greater flexibility and convenience to our clients—without compromising the quality, accuracy, or reliability of our testing services.

The above confirmation is based on our internal validation studies under specified laboratory conditions. Clients are advised to follow all instructions for use and applicable regulatory requirements. Use of alternative collection devices outside the validated scope or under different conditions may affect test performance.

If you have any questions or require further clarification, please do not hesitate to contact us.

Thank you for your continued trust and support.

Best regards,
CHAN Suit Fong, MSc
Senior Director, Lab Operations
