

ARE YOU AT RISK OF LUNG CANCER?

**Get checked with
LUNGClear™ at your
family physician or
screening provider
for peace of mind.**

PLEASE CONSULT YOUR
PHYSICIAN FOR PERSONALISED
MEDICAL ADVICE TODAY:

WHY SCREEN FOR LUNG CANCER?

In the early stages, lung cancer usually has **no symptoms**.

20% of **stage 4** lung cancer patients survive five years or more from diagnosis. 68% of lung cancer cases are diagnosed at stage 4.

Screening helps detect lung cancer early, **improving chances of survival**.

65% of patients diagnosed at **stages 1 & 2** survive five years or more.

WHO IS AT RISK OF DEVELOPING LUNG CANCER?

YOUR RISK OF DEVELOPING LUNG CANCER IS INCREASED IF YOU:

Smoke or used to smoke **cigarettes**.

Have **secondhand exposure** to cigarette smoke.

Have an **immediate family member who has/had lung cancer**.

However, you may still develop lung cancer even without any of the above risk factors.

About 33-50% of lung cancer patients in Singapore and East Asia have never smoked.

The Straits Times, Lung cancer screenings should be extended to non-smokers: Expert, 4 Dec 2023.
Zhou F, Zhou C. Lung cancer in never smokers - the East Asian experience. Transl Lung Cancer Res. 2018 Aug.

LUNGCLEAR™ AIDS IN THE EARLY DETECTION OF LUNG CANCER, EVEN BEFORE SYMPTOMS APPEAR.

Powered by Mirxes' technology, **LUNGCLEAR™** is a blood test that detects a molecular signature associated with lung cancer.

The test reports a risk score which will indicate if you are at **Low**, **Intermediate**, or **High Risk** of having lung cancer.

Your doctor will evaluate the LUNGCLEAR™ report together with clinical findings, and determine if further medical evaluation, such as a low-dose CT scan, is advisable.
